It is also clear that the *lateral* and *anterior* boundaries of the *anterior* and *posterior* lobes of the liver are not sharply defined, but are rather gradually merged into each other. The *anterior* lobe is situated in front of the *posterior* lobe, and the *posterior* lobe is situated behind the *anterior* lobe.

As a result, the *labeled* and *unlabeled* data are combined to form a single dataset, which is then used to train a model. The model is then used to predict the labels for the unlabeled data. This process is called semi-supervised learning.

As a result of the above, the following recommendations are made to the Ministry of Environment and Natural Resources:
